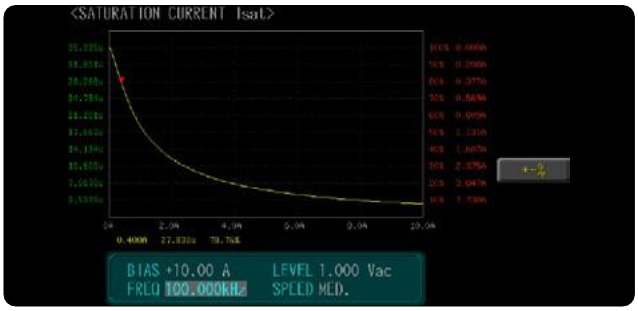
Key Features

A Accurately Test Magnetics Carrying DC Bias Current



Isat (Magnetic saturation current curve)

The value of the inductance is 2.06983uH.

Using a DC Bias current source to apply a 10A bias current to the inductor, the inductance decreased from 2.06983uH to 1.02845uH.

Irms (Rated current curve)

Inductor copper foil cracked due to high temperature

Magnetic saturation current is called I sat, and the temperature rise current is called I rms. When the transformer and the inductor pass a large current in the actual circuit operation, the magnetic field of the magnetic core will produce magnetic saturation, which will cause the inductance characteristic to decline. Therefore, the R&D engineer will set the current value of the inductance reduction allowable range.

B DC Bias Fixtures

F6210
Standard Fixture

F6220
SMD Fixture

Standard fixture F6210 for measuring inductance, optional fixture F6220 for measuring SMD inductance.

C Rack-mounted System

Reserve space for expanding current, support computer connection software, and save measurement data.
